Dear Ms. Jess Cartier:

I am applying for the Software Developer Intern position which is posted on MyCareer website of Conestoga College. I will be finishing my third year of the Bachelors of Electronic Systems Engineering at Conestoga College in August, 2017. I am very interested to get an opportunity to work at Agfa HealthCare Inc during my co-op semester from September to December 2017, as it fits well with my career interests.

During my last co-op from January to April 2017, I had worked as a research assistant in Applied Research Department at Conestoga College. Most of my work was concentrated on circuit design and development of a low cost underwater ultrasonic sensor. In addition to this, I had worked on many academic projects including mobile camera platform, elevator control system design, and embedded robot controller. I had used C/C++ for my academic projects, and am also learning Python and web developing. I am detailed oriented with logical thinking and curious to learn about modern technologies.

I would appreciate the opportunity to discuss my qualifications further in an interview. If you have any query, please call me at 647-853-6144 or send me an email at Adhaliwal8154@conestogac.on.ca. Thank you for your consideration and I look forward to hearing from you.

Sincerely,
Akemjot Dhaliwal
